GrowthPath Portfolios

- Each Portfolio seeks to maximise assets for retirement or other purposes consistent with the risk level that investors may be willing to accept given their investment time horizon.

Among all the Portfolios, the Managers will maintain the lowest risk level for GP Today. On average, 20% of GP Today’s assets will be invested in equities with the rest in bonds. GP Today will allocate a portion of its assets to stocks and bonds as the Managers believe that most investors are still willing to take some risks in pursuing returns even while drawing on their investments. • For GP Today, the approximate initial model percentage allocation as at 30 August 2002 is Singapore Equities: 15%; Global Equities: 5%; Singapore Bonds: 52%; and Global Bonds: 28%. Market and Credit Risks	
<ul style="list-style-type: none"> • You are exposed to market risks in the global markets. <ul style="list-style-type: none"> o Prices of the securities that GP Today (and its UOBAM Underlying Entities) invests in may be affected by changes in economic conditions, interest rates and the market’s perception of the securities, which in turn may affect the value of your investment.

Product-Specific Risks											
<ul style="list-style-type: none"> ● You are exposed to asset allocation model risk. <ul style="list-style-type: none"> ○ GP Today will be managed utilising an asset allocation model developed by the Managers. GP Today and the Managers cannot offer any assurance that the recommended allocation will either maximise returns or minimise risks, or any assurance that a recommended allocation will prove the ideal allocation in all circumstances for every investor with a particular time horizon. ● You are exposed to risks associated with bonds. <ul style="list-style-type: none"> ○ Bonds are subject to the risks of fixed income investing. Although these risks include short-term and prolonged price declines, such price declines in the bond market have historically been less severe than stock declines. Bonds are also subject to interest rate risk. Bond prices tend to move in the opposite direction from interest rate movements and as such bond prices may be adversely affected by rising interest rates. Bonds with longer maturities are more affected by interest rate movements than bonds with shorter maturities. ○ Bonds also face credit risk. Credit risk is the risk that the borrower that issued a bond may not repay principal or interest when due. ● You are exposed to risks relating to derivatives. <ul style="list-style-type: none"> ○ An investment in a FDI (including foreign exchange forward contracts and equity index future contracts) may require the deposit of an initial margin and additional deposit of margin on short notice if the market moves against the investment position. If the required margin is not provided in time, the investment may be liquidated at a loss. Therefore, it is essential that investments in FDIs are monitored closely. The Managers have controls for investments in FDIs and have in place systems to monitor the FDI positions of GP Today. ● You are exposed to concentration in the UOBAM Underlying Entities. <ul style="list-style-type: none"> ○ GP Today may have a large concentration of investments in each relevant UOBAM Underlying Entity and could consequently be subject to significant losses where the relevant UOBAM Underlying Entity declines in value or is otherwise adversely affected.
